

VEGETATION MANAGEMENT NOTIFICATION

Century Forestry Consultants Ltd. has made application to Nova Scotia Environment for approval to conduct a forestry vegetation management program. Approximately 950 hectares have been submitted for treatment in Cumberland, Colchester, Hants, Pictou, Halifax and Guysborough counties.

The program involves aerial application of silvicultural herbicides which are registered by the Pest Management Regulatory Agency of Health Canada under the Pest Control Products Act, and regulated by the Nova Scotia Environment Act, 1995.

Vegetation management is used to promote the survival and growth of young planted or naturally occurring conifer seedlings. The project is undertaken at the request of and with the full consent of the landowners.

Notification signs are posted on access roads to treatment areas and dwellings within 500m will receive written notification at least 30 days prior to treatment. The program is scheduled to be conducted between September 1 and September 30, 2019.
