

# KNEE PAIN?

DON'T SUBMIT TO KNEE SURGERY BEFORE READING THIS

There are far too many unneeded knee replacement surgeries happening in the U.S. In fact, more than 60,000 knees are replaced each year.

## Dangers of Knee Replacement Surgery Include:

- Knee replacements take months to years to recover, with many patients still experiencing knee pain.
- Anesthesia risks include death, dementia and an increased risk of developing Alzheimer's and Parkinson's disease, according to the American Society of Anesthesiologists.
- According to heathline.com knee replacement surgeries are particularly likely to cause blood clots.
- Surgery of any type makes you even more susceptible to infections.
