Now Offers Regenerative Therapy!

The Stem Cell Tristate devotes much of its time treating chronically ill patients -especially those in pain. With 3 years experience, serving Cincinnati with multiple practices, it continues to utilize cutting-edge technology to help restore patients' health. The institute recently announced its latest state-of-the-art healing procedure: regenerative stem cell therapy.

The Stem Cell Tristate is now offering painless, FDA approved Amniotic Stem Cell Injections and advanced procedures for arthritic and/or degenerative conditions, especially those found in the knees, hips, shoulder, neck and lower back.

These remarkable treatments can repair tissue in the body that has been damaged from age, disease or degeneration. They do this by pinpointing the impaired areas, removing the swelling with powerful anti-inflammatory properties and healing them by regenerating cells and tissue.

This innovative therapy is particularly effective in treating such conditions as degenerative arthritis, degenerative cartilage and ligaments, bone spurs, degenerative joint disease, bursitis and tendinitis, especially Osteoarthritis of the Knee.

According to the Stem Cell Tristate chief medical officer, patients can experience a significant decrease in pain and an improvement in range of motion within weeks of treatment.

"We are so excited about the results we are seeing with our patients. More importantly, our patients are excited about living their lives enjoying the activities they enjoy. We invite you to attend one of our upcoming seminars near your home, to learn more about this incredible healing technology and how it might be able to help you or someone you love finally live a pain free life." Dr. Jill Howe DC, CNPS, Chicagoland Director for the Stem Cell Tristate.
