*Are YOU a candidate for this safe and effective procedure?*

CUT IT OUT

- Known herniated disc (diagnosed)
- Back or neck pain w/wo leg sciatica or arm pain
- Cautious about dangers of pain killers
- Tried non-medical therapies, e.g. stretching tables
- Tried injections, e.g. epidurals
- Considered conventional surgery
- Have a current M.R.I.

*Complete this check list and call the office for directions or mailing instructions.*

Gabriele Jasper, M.D., a double board certified leader in minimally invasive spine surgery is offering a new program. ***Without charge to you,*** we will review your M.R.I. report and the check list shown here.

You will then be contacted regarding your status as a candidate for Endoscopic Discectomy, which removes disc herniations that are pinching nerves and causing sciatica, back and leg pain.

***Basic Endoscopic Discectomy:*** The procedure utilizes a small metal "straw" through which a miniature camera and delicate instruments are used to remove the herniation.

This system also facilitates removal of irritating bone spurs which eliminate spinal stenosis by opening the spinal canal.

*For your convenience and comfort, all procedures may be conducted at our new "state of the art" Ambulatory Surgery Center, located at the Brick office.*

**732-262-0700**

**74 Brick Boulevard Suite 124  
Brick, NJ**
