

What is Stopping You from calling Us?

Don't live every day embarrassed about your teeth when we have a solution!

Smile when you want, eat what you want and have all the confidence in the world

Ventura County (CA) Dental patients "holding on" to hopeless teeth affected by gum disease and denture wearers who've "had it" with their devices find new hope in Ventura County with a breakthrough in teeth repz dental specialist at Anacapa Dental Art Institute, offers the innovative "Permanent Teeth in One Day™" with All on 4 Dental Implants in Oxnard.

Using only four dental implants, this advancement gives patients a one day tooth replacement option that's comfortable and minimally invasive. It's a state-of-the-art alternative to dentures and a stable, economical, and long-lasting teeth replacement option. It also preserves bone and returns patients to enjoying a variety of healthy foods immediately following treatment.

"We take what in the past was a completely hopeless smile," says Dr. Jivraj, "and replace it with a stable, healthy one, and do this within a day using the All-on-4® technique. The new teeth feel, look and act like natural teeth. For some patients, they're better than their originals! Virtually unbreakable¹, the teeth are stronger than natural teeth or any previous dental material and can last a lifetime."

No bone grafting.

Most implant techniques offered in traditional dental practices require expensive and time consuming bone grafts. "Permanent Teeth in One Day™" uses strategic locations and angles to make grafting unnecessary for the majority of patients. For the small percent who, in the past, would require

grafts, a second innovative procedure, the zygomatic implant, allows them to also avoid the cost, pain, and time of grafting. "The use of zygomatic implants is unique to Anacapa. I don't know of another office convenient to Ventura allowing patients with severe bone loss to have solid teeth without expensive grafts," says Dr. Jivraj.

Walk out with your new teeth within a day.

The procedure is completed within a day, including any extractions, implant placement, and attachment of the new teeth. Preliminary consultations are used to plan and prepare for the procedure. "Planning includes a painless 3D dental CT scan," says Dr. Jivraj.

"It gives us a 360 degree 3D view." Thanks to this technology, treatment is mapped out ahead of time. It means a less invasive surgery and less to no post-surgery discomfort. We also use a proven protocol of pre- and post-surgical medications that has patients telling us routinely that they had a completely *pain-free* surgical experience."

Even with this high-level

of service, Dr. Jivraj keeps costs very competitive and financing options are available. Dr. Jivraj offers a free consultation and free 3D dental CT scan. Call 805-919-8050 to schedule.
