## These German hearing aids will change your life!

- Most discreet design
- Best in speech understanding
- Bluetooth connectivity

**THE FUTURE OF MODERN  
HEARING SYSTEMS IS HERE**

Signia/Siemens has unveiled its new NX hearing system platform and it is revolutionizing the hearing aid industry! After 50 years of research and development, the German engineers have found a way to pack cutting-edge technology in a device so small that it seems to disappear behind or inside the ear. Older hearing aids of the past were so visible and just seemed to make sounds too loud.

These German hearing systems are mini computers that can pick up voices and reduce background noise automatically. The new NX technology uses a unique algorithm that is clinically proven to deliver better than normal hearing results. This allows you to understand your family and friends more clearly even in crowded restaurants. The Bluetooth connectivity allows you to talk on the phone, listen to music, and watch TV, all of them stream directly to the hearing aids.
