

Hip and knee joint preservation

If you're middle aged, pain in your hips and knees doesn't necessarily mean it's time to have them replaced. Talk to **Dr. Jon Henry** about it. He's a fellowship-trained orthopedic surgeon offering a variety of minimally invasive arthroscopic procedures to treat labrum tears in the hip or cartilage or meniscus tears in the knee.

He also offers knee ligament reconstruction surgery. There's no need to travel for innovative joint care.
