

# Hearing loss and your health.

**DID YOU KNOW...**

...that untreated hearing loss impacts our lives? It can lead to communication problems with family, friends, and colleagues and can lead to irritability, stress, isolation, cognitive decline, and even early onset of dementia.

That's why it's important to get your hearing checked. Treating hearing loss is key to preserving your health. Many prevalent health conditions in baby boomers and seniors have a very strong link with hearing loss. In fact, left untreated, hearing loss can affect cognitive brain function especially in older people, and is associated with the early onset of dementia.<sup>1</sup>
