

Hearing loss and your heart.

DID YOU KNOW...

...there is a strong link between the heart and your hearing? In fact, a growing body of research show that a person's hearing health and cardiovascular health frequently correspond.¹

Poor cardiovascular health causes inadequate blood flow and blood vessel trauma to the inner ear. The inner ear is so sensitive to blood flow that disorders such as hearing loss, particularly at the lower frequencies, may be an early warning sign of cardiovascular disease. It is extremely important to get your hearing checked at least once a year. A simple hearing

screening may even preserve your health and independence; and hearing aids can prevent cognitive decline, injury-causing falls, and even the early onset of dementia.

Signia, the new name for Siemens hearing instruments.

Call today for a RISK FREE TRIAL following a complete hearing evaluation to see if the new Signia hearing aid product is the right fit for you.
